INVESTOR BRIEF · 2026

b

b.unit

Generative game audio with context

Game dev is already AI.

Smaller teams. Repetitive work handed to AI teammates. This isn’t a forecast.

THE PROBLEM

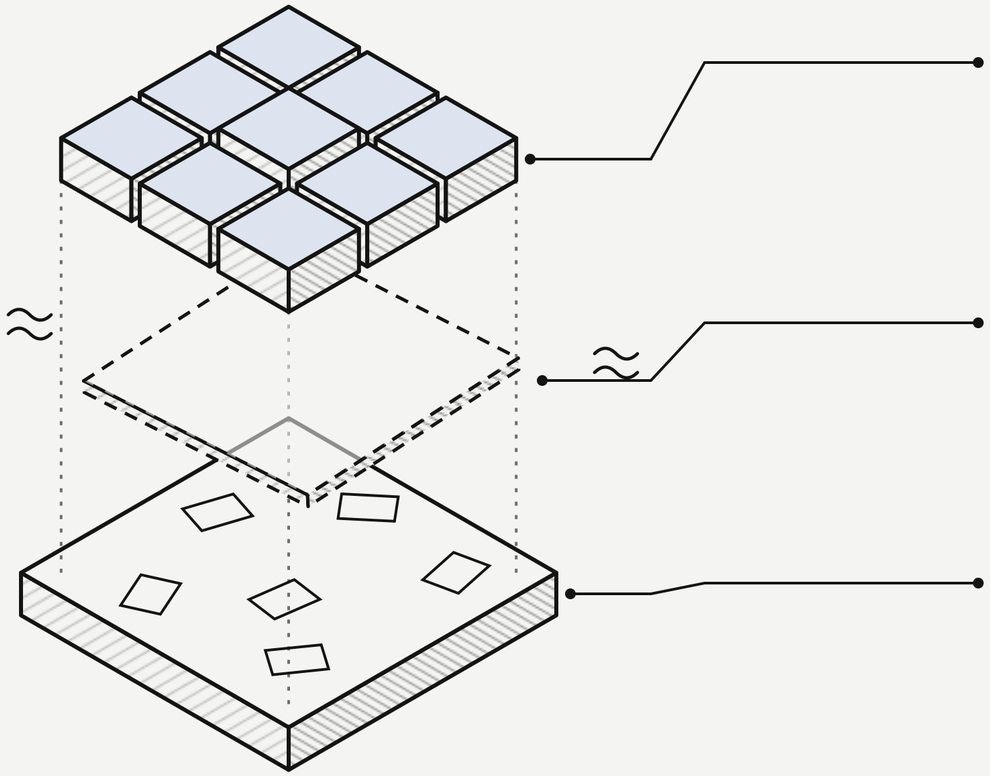

AI was supposed to raise the ceiling. For game audio — it lowered it.

Base audio models have no context for the game. Teams generate hundreds of takes, sift through them by hand, and settle for an average result far from what they imagined.

The standard is low and incomplete — we can’t accept that.

THE GIST OF IT

Gen AI audio.

LAYER 3 · B.UNIT

Compound

Skills built for game dev: context, state, style, loops, variations and layers.

LAYER 2 · UNSTABLE

Wrapper

One model behind an interface. Inherits its randomness, breaks when it changes.

LAYER 1 · WHAT EVERYONE USES

Base model

Random and generic: no context, no state, no style, no fit for game dev.

We build a brain that is always up to date and in the context of the game.

An MCP that joins the dev team.

01 Reads the project to learn what the game is

02 Generates sound and music with context

03 **Unique abilities**

04 Delivers it back, wired to every event trigger

05 Code never leaves the studio’s machine

* No reverse engineering. We own the training data.

Live on 5 funded studios

Whalo · CANDIVORE · Vaulty Studios · Spaceplay

ROUND 1

Pre-seed

Scale b.unit.

SPEED THINGS UP

- Pillars
- Key team members
- Dataset / compute
- **More features (playable ads, marketing videos, vocal acting)**
- Positioning
- Access to more funds

The team.

CEO

Jony

- 15 years in gaming
- Jelly Btn/ Playtika
- Co-founder of BRRRT

COO

Roy

- 8 years in gaming
- Audio tech expert
- Co-Founder of BRRRT

CTO

Nir

- 18 years in software
- EquityBee’s architect
- Co-founder of Boldwin

b

Thank you.
