b.unit

Generative game audio with context

Game dev is already AI.

Smaller teams. Repetitive work handed to AI teammates. This isn’t a forecast.

CODE	**ART**	**DESIGN**	**QA**	**AUDIO**
AI teammate	AI teammate	AI teammate	AI teammate	**No real teammate**

AI was supposed to raise the ceiling. For game audio — it lowered it.

Base audio models have no context for the game. Teams generate hundreds of takes, sift through them by hand, and settle for an average result far from what they imagined.

The standard is low and incomplete — we can’t accept that.

Three ways to build with AI audio.

TIER 1 · FRAGILE

Wrapper

One external model behind an interface. Breaks when the model changes, fails, or ships the feature itself.

TIER 2 · B.UNIT TODAY

Compound

Routes across base models. Post-trained on production data. Wired into the pipeline. Any model can be replaced.

TIER 3 · DESTINATION

Base model

Owns the full stack and the result. Built for what games need.

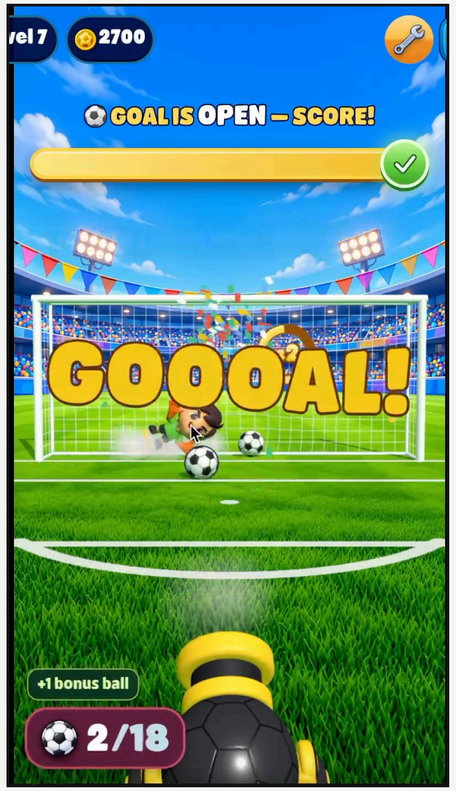

Our Unique Formula; Dynamic base model + post-training on our own data: we build a brain that always keeps context of the game.

An MCP that joins the dev team.

- Reads the project to learn what the game is
- Generates sound and music with context
- Unique abilities like looping, variations, saved state and layers
- Delivers it back, wired to every event trigger
- Code never leaves the studio’s machine

Live on 4 titles with funded studios

Whalo CANDIVORE Vaulty STUDIOS

We build from the top down.

Model companies build a model, then look for a market. We start inside the production converting our trusting clients to save cost in production and offer areal solution

USE OF FUNDS

- Pillars / Infra
- Convert Our Clients
- Key Team Members
- Dataset - Post Training / Copmute
- Travel - Marketing Establishment

The team.

CEO

Jony

- 15 years in gaming
- Jelly Btn/ Playtika
- Co-founder of BRRRT

COO

Roy

- 8 years in gaming
- Audio tech expert
- Co-Founder of BRRRT

CTO

Nir

- CTO of EquityBee
- 10 years of coding
